

BENEFITS OF LIFER AS ORAL IRON SUPPLEMENT :

- Easy to administer
- Free from serious side effects of Iron injections.
- Besides Iron LIFER provides calcium & B vitamins needed for rapidly growing animals.

SALIENT FEATURES :

- Lifer contains iron for the prevention & control of iron deficiency anaemia in piglets & adults.
- Lifer supports early recovery during treatment of various infections, coccidiosis & blood loss.
- Lifer is the best formulation for the prevention & control of stress.
- Lifer contains calcium for strong bones & more egg production.

COMPOSITION :

| | | |
|---------------|---|---|
| Minerals | : | Ferrous Gluconate & Calcium Lactate |
| Vitamins | : | B ₁ , B ₂ and Niacinamide |
| Liver Extract | : | Liver Extract |

INDICATIONS :

Anemia, anorexia, stress, supportive therapy with treatment, coccidiosis, blood loss, thin shelled eggs, poor hatchability and reduced egg production.

DOSAGE :

| | |
|------------------------------|---------------------------------------|
| Swines : | |
| Boosters | : 5.0 ml. per litre of drinking water |
| Prestarters | : 4.0 ml. per litre of drinking water |
| Starters | : 3.0 ml. per litre of drinking water |
| Growers | : 2.0 ml. per litre of drinking water |
| Fatteners | : 2.0 ml. per litre of drinking water |
| Breeders | : 3.0 ml. per litre of drinking water |
| Poultry : | |
| Chicks | : 2.0 ml. per litre of drinking water |
| Growers & Broilers | : 2.5 ml. per litre of drinking water |
| Layers & Breeders | : 3.0 ml. per litre of drinking water |
| Cattle | : 3.0 ml. per litre of drinking water |
| Horse | : 50 ml. daily |
| Calf, Sheep & Dog | : 15-25 ml. daily |

PACK : 1 Litre & 5 Litres

product manufactured by ISO 9001:2000 & GMP Certified Co.

LiFER[®]

Anti-anemia and Performance Enhancer

Piglets body weight increases very rapidly. As sow's milk is deficient in iron, they need extra iron for massive production of hemoglobin that carries oxygen to rapidly growing tissues of piglets. Iron deficiency leads to anemia, which is responsible for about 10% of pre weaning mortality in untreated litter

Performance decreases during stress or in disease conditions hence supplementation of performance enhancers is must.

Thanks **LIFER**

For supporting my life
